## Thermal safety shut-off device

The **TVD** is a **thermal safety shut-off device** that stops the gas flow in case of excessive ambient temperature, e.g., due to fire. The valve is rated to shut the gas flow for **90 minutes with temperature up to 1472 °F | 800 °C**. There are two sizes depending on the flow rate and required pressure drop: TVD1 and TVD2.
